"Nuclear gene trees and the phylogenetic relationships of the mangabeys (Primates: Papionini).";

MOL. Biol. Evol. 15:892-900(1998).

-I- FUNCTION: Accessory protein for MHC class-II antigen/T-cell receptor interaction. May regulate T-cell activation.

-I- SUBUNIT: Associates with p56-lck (By similarity).

-I- SUBCELULAR LOCATION: Type I membrane protein.

-I- SIMILARITY: Contains 3 immunoglobulin-like V-type domains.

-I- SIMILARITY: Contains 1 immunoglobulin-like V-type domains.
                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. "Cloning and partial nucleotide sequence of human immunoglobulin mu
"Cloning and from B cells and mouse-fundan hybridomas.";

Proc. Natl. Acad. Sci. U.S.A. 77:6027-6031(1980).

-I- MISCELLANEOUS: All 4 combinations of the S/G and V/G polymorphic
at positions 192 and 216 have been observed in human mu chains.
                                                                                                                                                                                                                                                                                                                                                                                 EMBL; X17115; CAA34971.1; ALT SEQ.
